

How to Embed a pdf File As a Viewable Image On Your Website

What do you do if you want to put your sales flier on your site, but you want it to look like the sales flier and not some clickable link?

You've spent a lot of time and/or money crafting a beautiful sales flier. You've got it saved as an Adobe .pdf file that people can download and print. But you want the actual information and the graphics to show up on the website along with that link.

It's easy to do this using Google Docs Viewer. I'm going to walk you through the process, step by step.

- 1 - Edit or Add the page where you want your pdf file to be posted.
- 2 - Click the "Add Media" button at the top of the Edit window. Upload your pdf file.

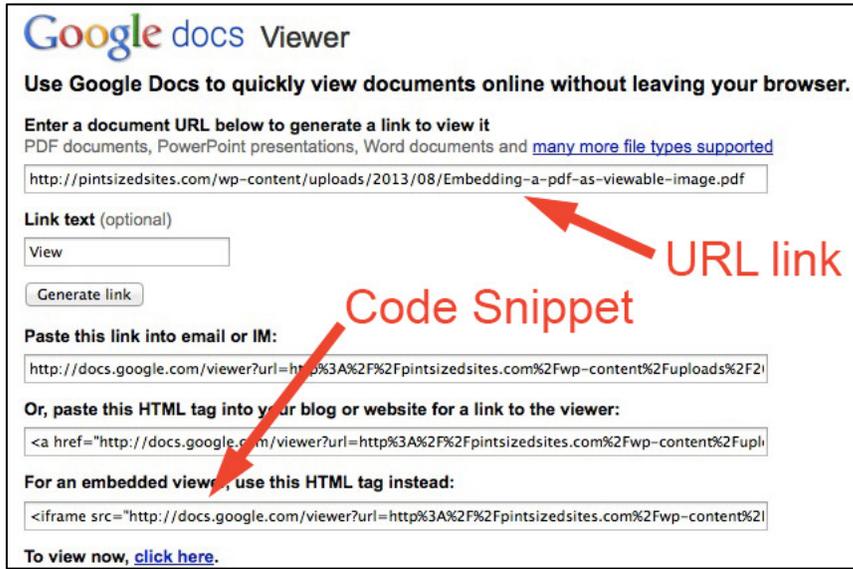

- 3 - Copy the link URL for the document. You might also just click "Insert into post" at this point and it will add the clickable link for the document.
- 4 - Open a new browser window or tab and go to Google Docs Viewer.

<http://docs.google.com/viewer>

How to Embed a PDF as a Viewable Image

5 - Paste the document URL in the "Enter a document URL below to generate a link to view it" box.

Google docs Viewer
Use Google Docs to quickly view documents online without leaving your browser.

Enter a document URL below to generate a link to view it
PDF documents, PowerPoint presentations, Word documents and [many more file types supported](#)

Link text (optional)

Paste this link into email or IM:

Or, paste this HTML tag into your blog or website for a link to the viewer:

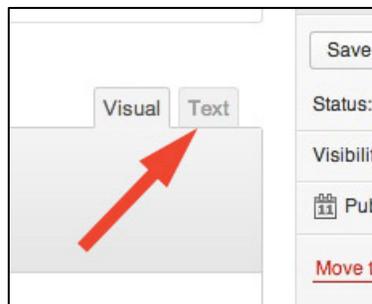

For an embedded viewer, use this HTML tag instead:

To view now, [click here](#).

6 - Click "Generate link"

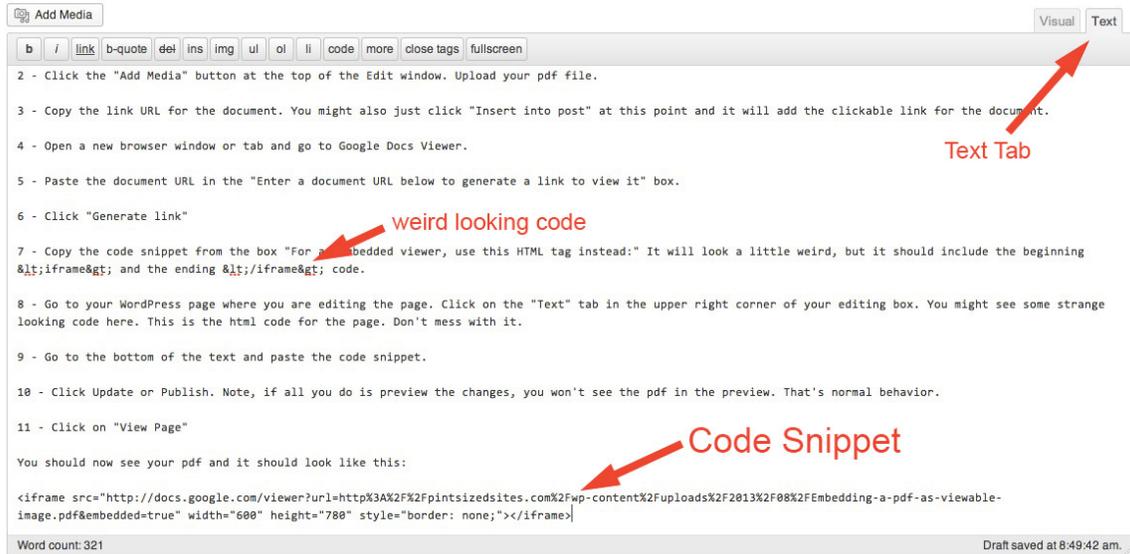

7 - Copy the code snippet from the box "For an embedded viewer, use this HTML tag instead:" It will look a little weird, but it should include the beginning `<iframe>` and the ending `</iframe>` code.

8 - Go to your WordPress page where you are editing the page. Click on the "Text" tab in the upper right corner of your editing box. You might see some strange looking code here. This is the html code for the page. Don't mess with it.

How to Embed a PDF as a Viewable Image

9 - Go to the bottom of the text and paste the code snippet.

The screenshot shows the WordPress editor interface. At the top, there is an 'Add Media' button and a toolbar with options like 'b', 'i', 'link', 'b-quote', 'del', 'ins', 'img', 'ul', 'ol', 'li', 'code', 'more', 'close tags', and 'fullscreen'. On the right side, there are two tabs: 'Visual' and 'Text'. The 'Text' tab is selected, and a red arrow points to it with the label 'Text Tab'. The main content area contains a list of 11 numbered steps. Step 7 is highlighted with a red arrow and the label 'weird looking code'. At the bottom of the text area, there is a code snippet for embedding a PDF, with a red arrow pointing to it and the label 'Code Snippet'. The code snippet is:

```
<iframe src="http://docs.google.com/viewer?url=http%3A%2F%2Fpint-sized-sites.com%2Fwp-content%2Fuploads%2F2013%2F08%2FEmbedding-a-pdf-as-viewable-image.pdf&embedded=true" width="600" height="780" style="border: none;"></iframe>
```

Word count: 321 Draft saved at 8:49:42 am.

10 - Click Update or Publish. Note, if all you do is preview the changes, you won't see the pdf in the preview. That's normal behavior.

11 - Click on "View Page"

You should now see your pdf.
